

This is an admin panel. You are @admin and you can change data here.

You can find information about user and their stats in the card.

UI

- Every user has:
 - username: required and key-sensitive
 - avatar: not required
 - status: not required
- If avatar field is empty, you should use some default image (choose any image you want);
- If status is empty, tabs should be displayed below username without whiteline;
- If user has status, you should display it and tabs below, so height of tabs and status field should be resizable; but status field should have max-height; card height static;
- If user has status that bigger than two lines, you should cut and display it with "..."
- Likes and Comments tabs are scrollable
- Add comment/Like/Unlike should be always in the bottom
- Card has static height and width, but they should fit the window. If window is smaller, there can be 2 cards in one row and etc
- Note: all this UI things can be created without js, please use only css, there's no need in pixelperfect, but it should look nice

UX

- All data you can read from JSON file
- You can add comment and like post
- If post is already liked you can unlike it
- If user is unregistered use default image and name field("Unregistered user")
- Use infinity scroll to upload more likes and comments (default:20)
- You can delete any comments
- Show how much time has passed from comment creation
- You can't update JSON file on the client side, so after click on 'Update' button display your object using this method <http://jsfiddle.net/sLq3F/>
